PRODUCT INSTRUCTIONS FOR USE (OPERATION)	
1. Type	Nails and screws for connector fastening are used in the assembly of structural elements. During work, there is a risk of injury from sharp ends and possible damage to materials or tools. It is recommended to use appropriate personal protective equipment, such as work gloves and safety glasses.
2. Application	Nails and screws are intended for fastening structural connectors in wooden or wood-based garden elements, such as pergolas, gazebos, terraces, or carports. They enable durable connections of beams, posts, and other components using metal connectors such as angles, perforated plates, joist hangers, etc. The appropriate type and size of nail or screw should be selected according to the type of connector and expected load.
3. Usage/Assembly	For installation, it is recommended to use appropriate tools: hammers, nail guns, screwdrivers, or impact drivers. In the case of hard wood, pre-drilling holes is advisable. Screws should be tightened carefully to avoid overloading or damaging the connector. Nails should be driven in perpendicularly and fully to ensure the stability and safety of the structure.
4. Maintenance	Regular inspection of the joints is recommended, especially after periods of heavy rain or frost. Any signs of loosening, corrosion, or mechanical damage should be promptly addressed – components should be replaced if necessary. Maintaining an appropriate anti-corrosion coating (e.g., galvanization) increases the durability of nails and screws.
5. Storage/Protection	Nails and screws should be stored in a dry, ventilated area, away from moisture and chemicals. It is recommended to keep them in their original packaging, which facilitates identification and prevents assembly mistakes. Do not mix different types and sizes of fasteners.
6. Transport	Transport only in original, closed packaging, protected from shifting, impact, and moisture. Protection from water contact is crucial to prevent corrosion and deterioration of mechanical properties.

SAFETY INFORMATION	
1. Identification of Hazards	The products pose no risk to health or safety, provided they are used as intended and the structures built from them are properly maintained. The products may have sharp edges.
2. Hazardous Substances	The products do not contain hazardous substances as defined in Regulation (EC) No. 1907/2006 of the European Parliament and of the Council of 18 December 2006, Articles 31 and 33 (REACH).
3. Waste	Waste generated from the use of the product (packaging, damaged, or destroyed products) does not pose a hazard to the user, provided it is disposed of in accordance with applicable legal regulations.
4. Personal Protective Equipment	Personal protective equipment must be used in accordance with occupational health and safety regulations.
5. Recycling	Material remaining after the demolition of a structure poses no threat to the environment.
