PRODUCT INSTRUCTIONS FOR USE (OPERATION)	
1. Type	Handles for doors, chests, and shutters are mounting elements designed to facilitate opening and closing. During installation, caution should be taken due to sharp edges, the risk of finger pinching, and potential damage to the material surface. It is recommended to use protective gloves and safety glasses, especially when drilling or working with metal.
2. Application	Handles are intended for installation in doors, garden chests, shutters, and other elements of small architecture or home/garden furnishings. They can be used with wood, plastic, or metal – depending on the structure and type of fastening. Proper handle selection should take into account the weight of the element, frequency of use, and environmental conditions the handle will be exposed to.
3. Usage/Assembly	For installation, appropriate tools should be used – typically screwdrivers, power drivers, or wrenches. Pre-drilling is recommended for hard surfaces to avoid cracking the material. Handles should be mounted firmly, without looseness, ensuring symmetry and aesthetics. Screws should be tightened with care – excessive force can damage the surface or the handle itself.
4. Maintenance	To maintain the aesthetic and functional quality of the handles, regular inspections are advised – especially in outdoor or weather-exposed locations. In case of looseness, corrosion, or mechanical damage, fasteners should be tightened or replaced. Cleaning should be done using mild cleaning agents, avoiding harsh chemicals.
5. Storage/Protection	Handles should be stored in a dry place, in the manufacturer's original packaging or containers that protect against moisture and dirt. They should not be stored loosely together with other metal elements to avoid mechanical damage or installation mix-ups.
6. Transport	During transport, handles should be properly secured – preferably in sealed packages that prevent movement and scratches. Avoid exposure to water and aggressive chemical substances, as these may cause corrosion or degrade the surface finish.

SAFETY INFORMATION	
1. Identification of Hazards	The products pose no risk to health or safety, provided they are used as intended and the structures built from them are properly maintained. The products may have sharp edges.
2. Hazardous Substances	The products do not contain hazardous substances as defined in Regulation (EC) No. 1907/2006 of the European Parliament and of the Council of 18 December 2006, Articles 31 and 33 (REACH).
3. Waste	Waste generated from the use of the product (packaging, damaged, or destroyed products) does not pose a hazard to the user, provided it is disposed of in accordance with applicable legal regulations.
4. Personal Protective Equipment	Personal protective equipment must be used in accordance with occupational health and safety regulations.
5. Recycling	Material remaining after the demolition of a structure poses no threat to the environment.
